INTRODUCTION

The report "List of Industrial Projects in Alberta" is a publication of the Business Services Branch of the Department of Business Development and Tourism. It is published semi-annually as part of the Branch's program to provide information on the level and direction of economic activity in the province.

This publication contains in addition to the listing of projects currently under construction and those completed in the last six months, a listing of proposed projects. While these projects have been publicly announced, there is no guarantee that they will ever be built; they are simply under consideration in the future plans of a company. In fact, it is most likely that some of the proposed projects will never be undertaken either because of changing economic circumstances or because the project in question may not secure the necessary approval from regulatory bodies. The total dollar figures provided should therefore be used only as an indication of the direction of future investment and not as an absolute measure.

While every effort has been made to ensure there are no serious errors or misinterpretations in the listing, the Department of Business Development and Tourism does not accept responsibility for errors nor does it wish to give the impression that these lists in any way represent an official or approved list of projects.

Information on industrial projects is based on data from press clippings, from published reports and from industrial development officers. A telephone and mail-in survey of firms listed is also conducted to verify reported information and to ascertain the confidentiality of statistics received. Therefore, this listing consists of projects for which some information is publicly available.

Other criteria used in the compilation of the list of industrial projects are as follows:

1) An industrial project was defined as
   a) an expansion of already existing industrial facilities or
   b) the construction of new industrial plants not associated with either the retail or wholesale trade, transportation (i.e. highways, pipelines, airports, etc.) or basic construction activities.
2) Only industrial projects with a total capital cost of $100,000 and over were considered.
3) The three lists of industrial projects are subdivided into six main industrial categories: Agricultural Processing, Forestry, Manufacturing, Mining, Petroleum and Petrochemical Products and Utilities. The Manufacturing category does not include secondary manufacturing in the Petroleum and Petrochemical industries.
4) In addition to identifying the specific location of the project, the Census Division is also provided for each industrial project.

It should also be noted that there are three main lists for the industrial projects, each designating the status of a project as of June 30, 1976

1) Proposed - The project was publicly announced before June 30th, 1976 and is not presently being built. Projects under consideration are also included. Some of

these projects may be competitive proposals by various companies and thus not all projects are likely to go ahead. Where the location of the projects was undecided, the site most often mentioned in press clippings was used.

2) Under Construction - The project is currently being built, that is the project is either in the site preparation stage or on-site construction work is underway.

3) Completed - The project was completed during the last six months, from January 1st, 1976 to June 30th, 1976, and is now in the operations phase.

Where information was not available or confidential, the abbreviation N/A has been used.

For further inquiries on definitions, methodology, or information on any specific project, please contact:

HIGHLIGHTS

The current list of projects reviews the six month period between January 1st, 1976 and June 30th, 1976. This list consists of 148 projects, 40 of which were completed in the above period, 55 were under construction and 53 proposed. The total potential capital value of all projects combined is $13.56 billion which could generate 12,651 additional jobs in Alberta. The bar charts on the page opposite reflect the activity of the past six months compared to the previous two six month periods. Overall, it would appear that the level of activity in Alberta will continue to remain at a fairly high level for the next period, with some sort of further "levelling off" taking place.

Proposed Projects

The majority of the proposed projects (52.8%) are in the Petroleum and Petrochemical Products sector* accompanied by a significant number in the secondary Manufacturing sector (18.8%). The twenty-eight projects in the Petroleum and Petrochemical sector represent $6.93 billion of planned investment and represent a potential 4,999 new jobs in Alberta.

---

* Includes secondary Manufacturing in the Petroleum and Petrochemical sectors.

The proposed projects are distributed fairly evenly throughout the province with the exception of a concentration in Census Division 11 (Major Centre - Edmonton). The majority of the projects proposed for Census Division 11 are associated with the Petroleum and Petrochemical Products sector.

In terms of employment, Census Division 12 (Major Centre - Fort McMurray) as a result of future potential oil sands development, could have roughly 58 per cent of new job openings. Census Division 11 (Major Centre - Edmonton) would account for 11.8 per cent of job openings and Census Division 6 (Major Centre - Calgary) 10.6 per cent.

Projects Under Construction

As of June 30th, 1976 there were 55 major industrial projects under construction with a total capital value of $3.4 billion.* Much of these investment dollars will be spent as a result of the Syncrude project which accounts for 68 per cent of the above figure. A large proportion of the projects (43.6%) are associated with the Petroleum and Petrochemical Products sector with a further significant portion (29.0%) of the projects taking place in the Manufacturing sector. A significant number of the projects (16) are located in Census Division 11 (Major Centre - Edmonton) most of which are in the Manufacturing

---

* This figure is presented for reference only and represents the sum of the total values for each project over its life time and it is not likely all or even a major proportion of these dollars would be spent during a given six month period.

sector. A significant proportion of the projects are also located in Census Division 2 (Major Centre - Lethbridge) and Census Division 12 (Major Centre - Fort McMurray).

A large percentage (60.1%) of the employment opportunities have been generated in Census Division 12 (Major Centre - Fort McMurray) largely as a result of the Syncrude project.

Completed Projects

Forty major industrial projects were completed in Alberta between January 1st, 1976 and June 30th, 1976 involving a total capital expenditure of $232.86 million.* This expenditure represents a decrease over the previous six months but is substantially greater than the two previous six month periods (i.e. June 1974 - December 1974, January 1975 - June 1975).

The majority of the projects completed in the past six months were in the Manufacturing sector (55.0%) and the Petroleum and Petrochemical Products sector (37.5%).

The number of new jobs created fell from 1,680 for the last six months of 1975 to 1,120 for the first six months of 1976. The majority of the job opportunities (36.3%) were created in Census Division 6 (Major Centre - Calgary) with a further substantial proportion (26.7%) in Census Division 11 (Major Centre - Edmonton).

---

* Total millions of dollars spent during the construction of the various projects.

1975 - A REVIEW

During 1975 ninety-four major industrial projects were completed in Alberta involving capital expenditures of 506 million dollars. These projects provided an estimated 3,058 new employment opportunities throughout the province.

The largest number of projects completed during the year were in Census Division 6 (Major Centre - Calgary) with a substantial number completed in Census Division 11 (Major Centre - Edmonton) and Census Division 2 (Major Centre - Lethbridge).

During 1975 the majority (48.9%) of the projects completed were in the manufacturing sector. Similarly, most of the jobs were created in the manufacturing sector (89.6%).

When examining the performance of the Alberta economy in terms of these projects, it is interesting to note that during the first six months of 1975, 50 projects were completed with a total capital value of $106.6 million, which created 1,394 new employment opportunities. For the first six months of 1976, 40 projects were completed with a total capital value of $232.8 million dollars. An additional 1,120 new jobs were created as a result of these projects. While this is a noticeable difference in the capital investment figures for the two periods, the employment created as a result of the completion of the various projects is of roughly the same order.

P A R T III

LIST OF INDUSTRIAL PROJECTS

PROPOSED PROJECTS - AS OF JUNE 30, 1976

While the projects in this section have been publicly announced, there is no guarantee that they will ever be built; they are simply under consideration in the future plans of a company. In fact, it is most likely that some of the proposed projects will never be undertaken either because of changing economic circumstances or because the project in question may not secure the necessary approval from regulatory bodies. The total dollar figures provided should therefore be used only as an indication of the direction of future investment and not as an absolute measure.

While every effort has been made to ensure there are no serious errors or misinterpretations in the listing, the Department of Business Development and Tourism does not accept responsibility for errors nor does it wish to give the impression that these lists in any way represent an official or approved list of projects.

APPENDIX I

TOTAL ACTIVITY

ALBERTA

Because of the highly sensitive nature of many of the proposed projects (and some of those actually starting construction) it is not always possible to release information or capital costs. In many instances the designation N/A reflects a suppressed value.

In addition some projects require a high degree of confidentiality because they are still in the negotiation stage. Any untimely release of data including specific mention of the project, could jeopardize the operation.

The following table was prepared in order to present some indication of the magnitude and levels of investment and employment if these projects were included in the relevant sections.

LIST OF INDUSTRIAL PROJECTS
AS OF JUNE 30TH, 1976
INCLUDING INFORMATION ON PROJECTS
NOT PUBLICLY AVAILABLE

	Number Of Projects	Total Dollar Value ($ Million)	New Jobs Created/Expected
Proposed Projects	112	10.676	9,438
Projects Under Construction	79	3.353	4,783
Projects Completed	45	.401	1,340
	236	14,430	15,561
